

Favorite vacation picture.

I am married with three children. Our oldest son is at Pittsburg state studying automotive. We have a son who will be going to University of Arkansas and a daughter who is going into 8th grade. All three of our children are adopted and come from different backgrounds and ethnic groups.

I began teaching science in 1989 and have worked at 6 schools both public and private and have taught multiple subjects. My certification is in both Biology and Chemistry which allows me to teach a wide range of science subjects. I taught Biology, Chemistry, life science and environmental science for 15 years before I decided to stay home with our children. During that time I started a tutoring business tutoring Chemistry and Biology at night. Nine years later I returned to the classroom and have been teaching Anatomy and Physiology, Forensic Science, and Zoology at Shawnee Mission South high school. I began ACT preparation classes two years ago when my own children struggled with the ACT and have continued to teach both group and individual sessions. I currently have a 7th grader who wants to prepare for the HSPT so I am offering a 7th grade math class to help students improve their math skills using IXL Math. With 2 off at college this year I am looking to expand my evening, weekend, and summer tutoring schedule.
